## **1 Introduction to the course of studies**

Applied Biotechnology			
<b>Short form:</b>	ABI	<b>SPO no.:</b>	HSAN-20212
<b>Program Director:</b>	Prof. Dr.-Ing. Anke Knoblauch		
<b>Study Counseling:</b>	Prof. Dr. Sibylle Gaisser		
<b>ECTS:</b>	90 points		
<b>Normal period:</b>	3 semesters		
<b>Prerequisite for participation:</b>	Degree with basic background in bioanalytic, biotechnology, bioprocess engineering, food technology, medical technology, molecular biology or comparable content with a minimum of 180 ECTS credit points, knowledge of English language at level B2 and German language at level A2		
<b>Usability:</b>	Master Applied Biotechnology		
<b>Learning outcomes:</b>			
<p>The general goal of the master's program in Applied Biotechnology is to provide engineers and scientists with biotechnological knowledge with the specialist, methodological and social skills that they need to apply scientific knowledge and processes and to act responsibly in business and society in their area of expertise.</p> <p>It is important to prepare the students for future work as managers in the field of biotechnology and related industries. Based on their previous studies, the students develop skills in order to meet the work requirements of the biotechnology environment, which is characterized by innovations and legal requirements. This also includes the ability to shape social processes critically, with reflection and with a sense of responsibility and in a democratic common sense, and to successfully meet the challenges of an international world. Regional, national and international requirements are taken into account as well as global sustainability goals.</p> <p>Graduates have comprehensive skills in the areas of biotechnological production, development and analytics as well as quality and laboratory management, supplemented by individual knowledge-broadening and deepening skills from economics, scientific, procedural or linguistic areas. In addition to the biotechnological specialist skills, social and methodical skills are also focused on to promote personality development with regard to later management functions. The course takes into account theoretical and practical content in a balanced way, which is taught in an application-oriented manner.</p> <p>The course enables graduates to work in professional areas, including activities related to biotechnology in international corporations, small and medium-sized companies, NGOs and authorities through to start-ups, which act more and more globally.</p>			
<b>Content:</b>			
<p>The standard period of study is 3 semesters and comprises 90 credit points.</p> <p>Students with a degree of 180 credit points must complete an additional bridging semester comprising 30 credit points within the first year of study.</p> <p>The study program is divided into the following module groups:</p> <ul style="list-style-type: none"> <li>• Mandatory modules (45 credit points): <ul style="list-style-type: none"> <li>Food Product Development</li> <li>Protein Purification</li> </ul> </li> </ul>			

Quality Management  
Statistics  
Bioeconomy and Technology Assessment  
Leadership and Research Management  
Bioprocess Engineering  
Analytics  
Applied Cell Biology

- Electives (15 credit points):  
freely selectable from the modules offered at the master's level at Ansbach University of Applied Sciences and the Virtual University of Bavaria
- Master thesis (30 credit points)

The modules are usually offered once a year and can accordingly be chosen either in the winter or summer semester.

The master thesis can be completed in either the winter or summer semester or across semesters.

**Graduation / Academic degree:**

Master of Science (M.Sc.)

## 2 Description of Modules

## 2.1 Compulsory modules

<b>Food Product Development</b>			
<b>Module abbreviation:</b>	ABI-FoodProductDevelopment	<b>Reg.no.:</b>	1
<b>Curriculum:</b>	<b>Programme</b>	<b>Module type</b>	<b>Semester</b>
	Applied Biotechnology (SPO WS 21/22)	compulsory module	1
<b>Responsible for module:</b>	Knoblauch, Anke		
<b>Lecturers:</b>	Knoblauch, Anke		
<b>Language of instruction:</b>	English		
<b>Credit points / SWS:</b>	5 ECTS / 3 SWS		
<b>Workload:</b>	Contact hours:		30 h
	Self-study:		120 h
	Total:		150 h
<b>Subjects of the module:</b>	1: Food Product Development		
<b>Lecture types:</b>	Seminar, Exercises, Pract. Training		
<b>Examinations:</b>	Portfolio exam (seminar paper 3-5 pages, project work 10-15 pages and Kolloquium 20 min.)		
	Prerequisite for the granting of credit points is the passing of the respective module examination in accordance with the SPO resp. study plan.		
<b>Prerequisites according examination regulation:</b>			
According to SPO or curriculum			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
On successful completion of the subject the student ...			
Technical and methodological competence:			
...understands trends and food development processes, can discuss and analyse them from different points of view.			
...is able to control the product development process from ideation to concept to prototypes to market.			
...can conceptualize and formulate a new food product, determine processing and packaging requirements for the product, prepare product specifications, packaging and labelling for the product.			
...consider aspects of sustainability in food product development.			
Competence to act:			
...has the competence to design and develop a new food product based on defined requirements.			
...can apply time management and project management skills.			
...synthesize information from a wide range of reliable sources using library and web resources.			
...is able to describe and evaluate food developing processes.			
Social skills:			
...work effectively and collaboratively with others as a member of a team on a major project.			
...is able to discuss and evaluate work results systematically.			
...contribute to the writing of a scientific report and make an effective presentation.			

**Content:**

The aim of this module is to provide the learner with a theoretical and practical knowledge of new food product development - including biotechnological tools -, from devising the initial idea through the various steps to developing a prototype product. The module starts with seminaristic teaching covering an overview of topics relevant to food product development:

- Food trends
- Types of innovation
- Product development processes: From the idea to the product – step by step
- Food production, including processing, packaging, hygiene and preservation
- Food quality, including sensory analysis, hygiene and nutritional aspects
- Sustainability
- Legislative requirements

The lectures are followed by exercises and practical work. The students work in small teams to develop a food product under the guidance of a supervisor. During exercises and practicals, completed by independent work, each group develop an idea for a new innovative food product.

The students define the target group(s) for their product and describe the new food from the raw material to the product. Market analysis are carried out and a product strategy is developed. Production processes as well as quality, hygiene, packaging, legislative requirements and sustainability aspects are taken into account. As far as laboratory capacities allow, prototypes are produced for demonstration purposes and analytical methods are applied.

The module will conclude with a “product launch” for which each team member will have to give a short presentation on some aspects of the product concept.

Note: Participation in the hygiene instruction is required for practical work in the food lab.

<b>Protein Purification</b>			
<b>Module abbreviation:</b>	ABI-ProteinPurification	<b>Reg.no.:</b>	2
<b>Curriculum:</b>	<b>Programme</b>	<b>Module type</b>	<b>Semester</b>
	Applied Biotechnology (SPO WS 21/22)	compulsory module	1
<b>Responsible for module:</b>	Fabritius, Dirk		
<b>Lecturers:</b>	Fabritius, Dirk (ABI-ProteinPurification) (ABI-ProteinPurification ZV)		
<b>Language of instruction:</b>	English		
<b>Credit points / SWS:</b>	5 ECTS / 4 SWS		
<b>Workload:</b>	Contact hours:		45 h
	Self-study:		105 h
	Total:		150 h
<b>Subjects of the module:</b>	2: Protein Purification ZV Protein Purification		
<b>Lecture types:</b>	Seminar, group work, Pract. Training		
<b>Examinations:</b>	Protein Purification: written exam, 90 minutes		
	Prerequisite for the granting of credit points is the passing of the respective module examination in accordance with the SPO resp. study plan.		
<b>Prerequisites according examination regulation:</b>			
According to SPO or curriculum			
<b>Recommended prerequisites:</b>			
Basic knowledge in protein biochemistry and chromatography			
<b>Objectives:</b>			
<p>Technical and methodological competence</p> <p>By the end of the course, students...</p> <p>... will gain experience in laboratory and group work, report writing and in presentation.</p> <p>... will be familiar with the principles and relevant techniques of protein isolation and purification in theory and practice.</p> <p>... are able to develop a concrete purification protocol based on the properties of a protein of interest.</p> <p>Professional action competence</p> <p>By the end of the course, students...</p> <p>... how to assess if a protein is pure and to determine its molecular size and composition.</p> <p>... by drawing up a written protocol for the laboratory tests carried out, the students demonstrate that they can carry out a selected fermentation process and describe it quantitatively.</p> <p>Social skills</p> <p>By the end of the course, students...</p> <p>... will have the ability to employ purification methods and to use them.</p> <p>... will be able to generally describe, study and analyse purification processes which are new to them.</p>			

... will be able to address themselves in a team to a confronted field of activity, distribute tasks among each other and to make an agreement about contents.

... will be in a position to frame their own position statement for a specific approach and to complete the argument with additional, objective relevant facts.

#### Content:

The module gives a fundamental introduction in advanced technologies for the isolation and purification of proteins. The module consists of presentations by the students and a practical course.

The topics of the presentations are:

- Strategies for protein purification
- The structure and stability of proteins (posttranslational modifications)
- Expression systems and localization of product (e.g. inclusion bodies)
- Stabilization and preservation of enzymatic activity
- Cell disruption and separation of proteins
- Filtration and centrifugation
- Chromatographic methods
- Crystallization and precipitation
- Analytical methods

The practical course consists of a complete process for the isolation and purification of an enzyme. Part of the practical course demands the preparation of instructions for the separation steps by the students. The separation steps are:

- Mechanic cell disruption and separation of cell debris
- Concentrating and diafiltration using membrane filtration (cross flow)
- Immobilized metal affinity chromatography (IMAC) and size exclusion filtration (GF)
- Desalting using size exclusion filtration

For analyses of the samples: Chromatographic methods, SDS-Page, determination of protein concentration and enzymatic assays are performed.

Quality Management			
<b>Module abbreviation:</b>	ABI-QualityManagement	<b>Reg.no.:</b>	3
<b>Curriculum:</b>	<b>Programme</b>	<b>Module type</b>	<b>Semester</b>
	Applied Biotechnology (SPO WS 21/22)	compulsory module	1
<b>Responsible for module:</b>	Fabritius, Dirk		
<b>Lecturers:</b>	Alex, Marco		
<b>Language of instruction:</b>	English		
<b>Credit points / SWS:</b>	5 ECTS / 3 SWS		
<b>Workload:</b>	Contact hours:		34 h
	Self-study:		116 h
	Total:		150 h
<b>Subjects of the module:</b>	3: Quality Management		
<b>Lecture types:</b>	Seminar, E pract. Training		
<b>Examinations:</b>	presentation, 20 minutes		
	Prerequisite for the granting of credit points is the passing of the respective module examination in accordance with the SPO resp. study plan.		
<b>Prerequisites according examination regulation:</b>			
According to SPO or curriculum			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>Technical and methodological competence</p> <p>By the end of the course, students...</p> <p>... will understand which targets are pursued by quality management in a project.</p> <p>... know which processes are involved in project management and quality management. They learn the context of how the ISO 9001, ISO 21500, ISO 10005 and ISO 10006 standards are implemented in practice.</p> <p>Professional action competence</p> <p>By the end of the course, students...</p> <p>... recognize that project management and quality management are interdisciplinary tasks and must be applied by all members of the project organization.</p> <p>... do understand the meaning and content of the documents "project management plan", "project quality plan", "inspection and test plans" and "quality records", in which project phase they are required and who in the project organization is responsible for their creation and implementation.</p> <p>Social skills</p> <p>After finishing the course, students will be aware that a well-integrated quality mgmt. is crucial for a successful project management.</p>			

**Content:**

Unit 1 – Project management

- Project management. norms / standards & definition of terms "project", "project types", "project objectives" & "project management";
- Project management. processes according to DIN ISO 21500 at a glance & practical examples;
- Project phases, phase gate process, interaction of project management processes & project phases;
- Project execution models, project organization for owner's & for EPC contractor execution model;
- Project management plan: meaning, content & practical examples.

Unit 2 – Quality management system (QMS)

- QMS norms & definition of terms "Quality", "Quality management", "QMS" & "PDCA-cycle";
- ISO 9001: quality management principles, QMS requirements & certification;
- QMS: what it can do / what it cannot do & QMS practical example;
- Customer/contractor/supplier – which QMS applies in the project.

Unit 3 – Quality management (QM) in the project

- QMS norms & definition of terms "QM", "QA", "QC" & "quality improvement";
- Quality planning process in the project phases, quality plan, inspection and test plans & risk-based quality assurance & practical examples;
- QA/QC in the project phases, practical examples (apparatus manufacturing /-field erection & pipeline manufacturing / -field erection); control of changes in requirements & control of nonconforming outputs;
- Quality improvement: Lessons Learned process in project phases & continual improvement of the QMS.

	Total:		150 h
<b>Subjects of the module:</b>	7: Statistics		
<b>Lecture types:</b>	Seminar		
<b>Examinations:</b>	seminar paper and presentation (outside the examination period) The requirements for the award of credit points are the passing of the respective module examination according to the SPO or the curriculum.		
<b>Prerequisites according examination regulation:</b>			
According to SPO or curriculum			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>Expertise and methodological skills:</p> <p>Students learn how to handle the programming language R to conduct basic descriptive analyses with real data. They learn how to write and structure an empirical research paper and know the major guidelines of academic writing.</p> <p>Practical skills:</p> <p>This course enables students to conduct basic data analyses. They can critically assess the validity of other empirical results that they are confronted with in corporate environments and can distinguish between correlation and causation. They will create value-added for firms with their ability to familiarize themselves quickly with new complex tasks, sort information, and comprehensively visualize and present results. In the short run, this course prepares the students to write an (empirical) master thesis and makes them more attractive for firms who look for interns or employees. In the medium run, this course is a good preparation for continuing courses in data analysis, and in the long run, this course prepares students for a career in data science-related jobs.</p> <p>Social skills:</p> <p>Working in groups, students practice their communication and team working skills. They learn to self-organize their workload and train their skills in time management to successfully and jointly finish the project. This will improve their self-esteem.</p>			

**Content:**

The progressing digitization implies that institutions and firms collect more and more data, for example, on production processes, employees, and customers. Firms can use these data to better forecast business developments or to analyze the impact of management decisions.

In this practical course, students learn hands-on how to handle and exploit real data in to answer business-related problems. The students apply basic statistical methods, such as regression analysis, and the programming language R and learn to distinguish between correlation and causality. Moreover, students learn how to visualize, document, and present the results of their data analysis comprehensively in a structured research paper.

The course comprises lectures and practical sessions. Throughout the course of the semester, they solve several problem sets to consolidate their skills. Moreover, groups of students analyze data themselves to answer a given research question. Grading is based on a five page thesis (excluding tables and figures) that summarizes the results of the group work.

The major outline of the course:

- Introduction to the programming language R
  - Data preparation
  - Data visualization
  - Descriptive data analysis
- Introduction to linear regression and statistical inference
- Structuring, documenting, and presenting results in a research paper/thesis
- Tipps for academic writing

**Social and self-competence:**

- The students have the ability to employ fermentation methods and to use them.
- to generally describe, study and analyse bioprocesses which are new to them.
- to address themselves in a team to a confronted field of activity, distribute tasks among each other and to make an agreement about contents.
- work team-orientated and based on the division of labour as well as presenting and documenting the data scientifically.

**Content:**

The module gives a fundamental introduction in advanced bioprocessing methods. Lectures and presentations of the students will cover the following topics:

- upstream processing and sterilization
- types of bioreactor and geometry
- mixing and agitation (stirrer)
- power input (newton number)
- aeration (kLa, OTR, OUR)
- fermentation strategies (chemo-/turbidostat)
- calculations (mass balances) and kinetics of a fermentation process.

The practical course consists of a complete fed-batch high cell density fermentation process.

- sterilization methods (SIP)
- pre-culturing and medium preparation
- preparation and calibration of probes (oxygen, pH, Blue-sens technology)
- monitoring and adjustment of the fed-batch fermentation process (e.g. oxygen supply)
- determination of biomass (photo- and gravimetric)
- calculations of feed rate, substrate consumption, growth yields, mass balances.

According to SPO or curriculum			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>Technical and methodological competence:</p> <p>After finishing the course, the students will have a broad overview of cell cultures systems and their applications in both, research and industry.</p> <p>Professional action competence:</p> <p>By the end of the course, students...</p> <p>... know basic cell culture techniques and typical equipment.</p> <p>... are able to plan, implement and interpret a series of experiments</p> <p>Social skills:</p> <p>The students effectively work together in teams during the practical training and protocol writing.</p>			
<b>Content:</b>			
<p>The lecture/seminar covers the following topics:</p> <ul style="list-style-type: none"> <li>• Basics in mammalian cell culture</li> <li>• Cell cultures as research tools</li> <li>• Cell cultures as model systems for drug screening and biocompatibility testing</li> <li>• 2D versus 3D cell culture</li> <li>• Tissue engineering</li> </ul>			

- Cell cultures in the production of recombinant proteins

The practical training (blended learning and presence) covers the following topics:

- basic cell culture techniques
- PCR for the identification of cell lines
- Mycoplasma detection by DAPI staining
- MTT assay
- How to write a scientific protocol?

For successful completion of the practical training, students complete self-study course in Moodle and participate in at least 80 % of lab time. They hand in solved tasks and a report on time.

<b>Module abbreviation:</b>	ABI-BigProjekt	<b>Reg.no.:</b>	
<b>Curriculum:</b>	<b>Programme</b>	<b>Module type</b>	<b>Semester</b>
	Applied Biotechnology (SPO WS 21/22)	Elective modules	1
<b>Responsible for module:</b>	Künzel, Sebastian		
<b>Lecturers:</b>			
<b>Language of instruction:</b>	English		
<b>Credit points / SWS:</b>	10 ECTS / 2 SWS		
<b>Workload:</b>	Contact hours:		12 h
	Self-study:		288 h
	Total:		300 h
<b>Subjects of the module:</b>	Big Project (Elective Course II + III)		
<b>Lecture types:</b>	Project		
<b>Examinations:</b>	project work (outside the examination period)		
	Prerequisite for the granting of credit points is the passing of the respective module examination in accordance with the SPO resp. study plan.		
<b>Prerequisites according examination regulation:</b>			
According to SPO or curriculum			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>Technical and methodological competence</p> <p>The students will be able to apply theoretical and practical knowledge gained during their preceding studies.</p> <p>Professional action competence</p> <p>By the end of the course, students...</p> <p>... will be able to independently plan, execute and document a medium sized scientific project in the field of biotechnology</p> <p>... will be able to independently learn new technologies and/or applications.</p> <p>... will gain experience in report writing and in presentation skills.</p> <p>... master team skills in the case of team projects, self-organization in case of individual projects.</p>			
<b>Content:</b>			
<ul style="list-style-type: none"> <li>• Students will be given a task by a professor or can suggest a topic, which has to be closely related to the field of biotechnology and has to be evaluated by a professor</li> <li>• The students will independently work on a medium sized project in working area strongly related to applied biotechnology under professional supervision by a professor.</li> <li>• Individual or team projects are possible.</li> </ul>			

- The students present the project and face the scientific discussion.

Important criteria are:

- Time and project management
- Management of knowledge
- Quality of documentation, presentation and discussion

<b>Curriculum:</b>	<b>Programme</b>	<b>Module type</b>	<b>Semester</b>
	Applied Biotechnology (SPO WS 21/22)	Elective modules	1
<b>Responsible for module:</b>	Fabritius, Dirk		
<b>Lecturers:</b>	Fabritius, Dirk		
<b>Language of instruction:</b>	English		
<b>Credit points / SWS:</b>	5 ECTS / 3 SWS		
<b>Workload:</b>	Contact hours:		34 h
	Self-study:		116 h
	Total:		150 h
<b>Subjects of the module:</b>	HCD-Fermentation: High Cell Density Fermentation		
<b>Lecture types:</b>	Pract. Training		
<b>Examinations:</b>	presentation, 20 minutes		
	Requirements for the award of credit points, are the passing of the respective module examination according to the study and examination regulations and the study plan.		
<b>Prerequisites according examination regulation:</b>			
According SPO- and study plan			
<b>Recommended prerequisites:</b>			
Basic knowledge in microbiology and biochemistry			
<b>Objectives:</b>			
Professional and methodical competences:			
<ul style="list-style-type: none"> <li>The students will gain experience in laboratory skills, work group and report writing.</li> <li>Upon successful completion of the module, students will be familiar with the principles and relevant techniques of modern cell cultivation (batch, fed-batch and continuous culture).</li> <li>They are able to develop a concrete fermentation protocol based on the properties of the organism used.</li> </ul>			
Social and self-competence:			
<ul style="list-style-type: none"> <li>The students have the ability to employ fermentation methods and to use them.</li> <li>to generally describe, study and analyse bioprocesses which are new to them.</li> <li>to address themselves in a team to a confronted field of activity, distribute tasks among each other and to make an agreement about contents.</li> <li>work team-orientated and based on the division of labour as well as presenting and documenting the data scientifically.</li> </ul>			
<b>Content:</b>			
The module gives a fundamental introduction in advanced bioprocessing methods.			
The practical course consists of a complete fed-batch high cell density fermentation process.			
<ul style="list-style-type: none"> <li>sterilization methods (SIP)</li> </ul>			

- pre-culturing and medium preparation
- preparation and calibration of probes (oxygen, pH, Blue-sens technology)
- monitoring and adjustment of the fed-batch fermentation process (e.g. oxygen supply)
- determination of biomass (photo- and gravimetric)
- calculations of feed rate, substrate consumption, growth yields, mass balances.

<b>Objectives:</b>			
Professional and methodological competence			
<ul style="list-style-type: none"> <li>• During the course, students go through a realistic innovation and product development process</li> <li>• This initially includes the basic composition of an interdisciplinary team</li> <li>• This is followed by the development and application of problem-solving strategies using the design thinking method</li> <li>• Students also learn methods for generating product or service ideas.</li> <li>• In addition, students receive targeted pitch training and improve their presentation skills.</li> </ul>			
Action competence			
<ul style="list-style-type: none"> <li>• Students learn and deepen key skills in the areas of project management, problem-solving methods, business sub-disciplines, team and communication skills and presentation techniques.</li> <li>• By attending the course, students are also able to assess an innovation process and go through it themselves in appropriate project teams.</li> </ul>			
Social skills			
<ul style="list-style-type: none"> <li>• Building, structuring and coordinating the work of interdisciplinary teams</li> <li>• Students apply team-oriented work and content-related division of labor</li> <li>• Focused and goal-oriented work under time pressure, focusing on the essential elements of product development</li> <li>• Students must demonstrate and apply presentation skills through interim presentations and live pitches</li> </ul>			

**Content:**

With its origins in the IT industry, the hackathon is now an innovative approach that is used in many industries both nationally and internationally to solve challenges and develop new innovative products and services. Creative minds come together temporarily to work on a given problem and jointly develop innovative solutions in the form of new concepts, prototypes or business models. Finding solutions in a team combines the different knowledge, experience and intuitive approaches of the participants to create a unique method for developing new, forward-looking ideas in a focused manner.

By participating in the "Hackathon" module, students acquire concrete and practice-relevant specialist knowledge as well as contemporary methods for overcoming a given technical, economic or organizational challenge. Within 3 full days of attendance, the participating students work almost around the clock in interdisciplinary teams on a challenge set by practice partners (companies from the region).

The event is designed as a practice-oriented workshop format in which the participating students can apply the methods and specialist knowledge taught directly to their own project work in a team and successively develop their own product idea and a prototype. In terms of methodology, the hackathon is based on the "design thinking" concept and other agile project management methods.

Finally, the teams must present their solution concept and prototype to an expert jury at a final event ("live pitch") and then concretize and submit it in a written student research project.

<b>Language of instruction:</b>	german		
<b>Credit points / SWS:</b>	2.5 ECTS / 2 SWS		
<b>Workload:</b>	Contact hours:		45 h
	Self-study:		30 h
	Total:		75 h
<b>Subjects of the module:</b>	Digital entrepreneurial Impact		
<b>Lecture types:</b>	Seminar		
<b>Examinations:</b>	Portfolioprüfung (außerhalb Prüfungszeitraum)		
	<p>Note for non-NIW students: Approval of the module for ECTS crediting by the head of degree program required. Must be obtained independently. Notes / information</p> <ul style="list-style-type: none"> <li>• Workshop day: Deep Dive - Sustainability Management</li> <li>• Workshop day: Deep Dive - Artificial Intelligence</li> <li>• Workshop day: Development of the problem-solution-fit</li> <li>• Final presentation &amp; networking event</li> </ul> <p>Prerequisite for the granting of credit points is the passing of the respective module examination in accordance with the SPO resp. study plan.</p>		
<b>Prerequisites according examination regulation:</b>			
none			
<b>Recommended prerequisites:</b>			
None			
<b>Objectives:</b>			
<p>Brief description</p> <p>The module provides in-depth expert knowledge on impact entrepreneurship with a focus on artificial intelligence (AI) and sustainability management/corporate social responsibility (CSR). It explores the question of how artificial intelligence can promote sustainability and be used in the context of impact/social entrepreneurship.</p> <p>The early discussion in the field of tension between AI and CSR offers a wide range of strategic opportunities and a high innovation potential for start-ups. The event is divided into 3 workshop days and a final presentation of results on the following topics:</p> <p>Basics of sustainability management/corporate social responsibility and artificial intelligence</p> <p>Teaching basic methods and software solutions in innovation management and corporate foresight</p>			

Identification of future opportunities and risks  
 Developing innovation strategies and scenarios, establishing and using them in the company  
 Interactive group work on the development of business models and innovations  
 innovations in the context of a case study (software-supported) Qualification objectives.  
 Professional competence and methodological competence  
 Research competence  
 Students acquire comprehensive and up-to-date specialist knowledge in the fields of sustainability management and artificial intelligence.  
 Apply various methods in the areas of strategic foresight, innovation field development and ideation.<<7p>  
 They can independently identify potential problem areas in these fields and develop solutions based on various options for action.  
 Digital Entrepreneurial Impact  
 Using practical examples, students learn methods for generating digital product or service ideas in the AI & CSR environment.  
 Personal and social skills  
 Building, structuring and coordinating teams  
 Students must demonstrate and apply presentation skills in the final pitches  
 Students acquire argumentation skills and critical reflection on socially relevant issues through discussions during the seminar and in dealing with the results to be developed Action skills  
 Students learn and deepen key skills in the field of AI / CSR as well as project management, problem-solving methods, business sub-disciplines, teamwork and communication skills and presentation techniques.  
 By attending the course, students can also assess an innovation process and go through it themselves in corresponding project teams.

**Content:**

Workshop 1: Deep Dive - Sustainability Management  
 Teaching the basics of "Corporate Social Responsibility"  
 Deep Dive I: Circular Economy, Deep Dive II: CSRD materiality analysis & toolbox  
 Discussion of current challenges  
 Presentation of the "Grand Challenges"  
 Group division and deep dive on the respective Grand Challenge  
 Environment and trend analysis for each grand challenge  
 Workshop 2: Deep Dive - Artificial Intelligence  
 Introduction to the topic of artificial intelligence and teaching the basics for understanding artificial intelligence  
 Deep Dive I Resource-saving AI, Deep Dive II Language models, assistant writing (e.g.) for CSRD  
 Discussion of current opportunities, challenges and risks of artificial intelligence  
 General application examples as inspiration for the Grand Challenges Identification of concrete application examples in the field of Grand Challenges and related areas  
 Workshop 3: Development of the problem-solution fit  
 Development of possible fields of innovation as an ideation starting point Ideation phase with iterative idea development (e.g. using brainwriting or World Café methods, Walt Disney method)  
 Development of the business case (rough) - what impact does the concept have on the Grand Challenge  
 Final presentation #svhs#&## Networking event:  
 Presentation, discussion and evaluation of the final concepts

<b>Objectives:</b>			
Technical and methodological competence: The students know structures and processes in a company. They acquire a basic understanding of industrial project management. They know procedures of data reporting. Professional action competence: The students are able to familiarize themselves with new subject areas and work on a project independently. They succeed in putting the technical and methodological skills acquired during their studies into the practice. They know how to document their results, evaluate them and present scientific results of their project. Social skills: The students integrate themselves into a new social environment. They get to know existing hierarchical structures and improve their communication skills.			
<b>Content:</b>			
The students work independently on a project in a field related to biotechnology. Outside of Ansbach University of Applied Sciences. The "Operational Practice" module includes at least 16 weeks in the company.
